

Models 217, 230, 230-24 Electronic Bilge Pump Switch

Instead of an unreliable and short-lived mechanical float switch, why not use the original Electronic Bilge Pump Switch? The Water Witch 217, 230 or 230-24 is a submersible electronic bilge pump switch allows boat owners to forever rid themselves of the archaic outdated float switch. The 230 has no moving parts, requires no adjustments and works in an oily bilge. This eliminates the chance of your battery dying or your pump burning out because of a failed mechanical switch. Water need only touch the lower sensor for 6-8 seconds to activate the switch. The delay eliminates pump stutter and once water has left the sensor, the switch continues to run the pump an additional 14 seconds to clear the output hose. Temperature, humidity or electrical noise will not effect this switch, nor will it interfere with other electronics. This switch comes with an unprecedented 7 year limited warranty and is in use by both the Canadian and U.S. Coast Guards. If it's good enough for them,.....why not for you?

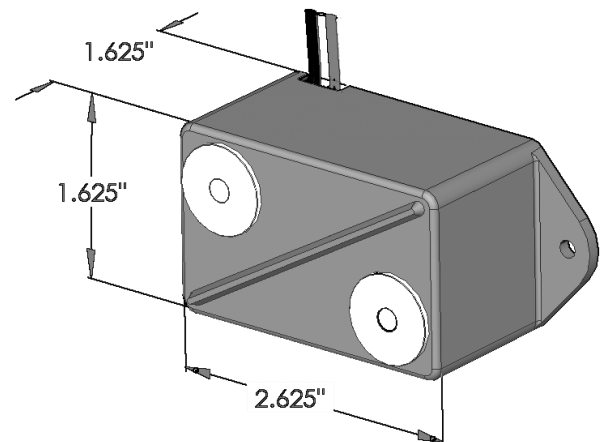

FEATURES & BENEFITS

- No moving parts & no electrolysis
- Impermeable to all bilge substances
- Activates when water touches lower sensor
- Will not interfere with other electronics
- Will not pump a bilge full of pure gas, diesel or oil
- Easy to install and mounts at any angle
- 30" lead of 16 gauge tinned copper wire
- 7 year unbeatable limited warranty
- Exceeds both United States Coast Guard and U.L. Standards

SPECIFICATIONS

Power Required:	12Vdc	(model 217, 230)
	24/32Vdc	(model 230-24)
Power used:	.006 Amps	
Size:	2 ⁵ / ₈ "W x 1 ⁵ / ₈ "H x 1 ⁵ / ₈ "D	
Weight:	4 ounces	
Delay on:	6-8 seconds	
Delay off:	15 seconds	
Capacity:	217	10 amps @ 12 Vdc
	230	20 amps @ 12 Vdc
	230-24	15 amps @ 24 Vdc

Installation Instructions

A fuse and manual override switch are recommended with the installation of a Water Witch electronic bilge switch.

1. Disconnect the battery.
 2. Select a mounting location for the Water Witch; the water sensor, the lower sensor furthest from the wires, should be above the standing water level.
 3. Always keep the wire connections above the "Standing Water Line".
 4. Connect the wires in the following order following the wiring diagram below
 5. From the Water Witch connect the Tan to the Positive (+) side of the pump or device being controlled, connect the Black to the Ground or the Negative (-) side of the battery and connect the Red to the Positive (+) side of the battery through a fuse.
 6. Reconnect the battery and the pump will run several seconds while the switch self-calibrates.
 7. WHENEVER POWER IS APPLIED, THE SWITCH RUNS THE PUMP FOR SEVERAL SECONDS TO SELF-CALIBRATE.
- The installation is complete.

Model 230

Model 230-24

Maintenance

The Water Witch requires little maintenance other than periodic cleaning of the sensors. Ordinarily this consists of hosing it down with fresh water and wiping it off with a clean rag or towel. Some high foaming detergents or high concentration of fish "slime" can delay or prolong cycle times and require more frequent cleaning of the sensors. Periodically check electrical connections for corrosion.

PURCHASE INFORMATION

Model #	Voltage	Max. Load	Category	Warranty
217	12Vdc	10A	electronic bilge pump switch	7 years
230	12Vdc	20A	electronic bilge pump switch	7 years
230-24	24Vdc	15A	electronic bilge pump switch	7 years
